#### INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/FR 03/03488

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Statement			
Novelty (N)	Claims	1-10	YES
	Claims		NO NO
Inventive step (IS)	Claims	1-10	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-10	YES
	Claims		NO

#### 2. Citations and explanations

#### 1. Technical field

Device for processing a signal emitted by a particle detector.

#### 2. Novelty

None of the citations mentions the reduction in the fluctuating component, and the subject matter of claim 1 is therefore novel.

#### 3. Inventive step

Document US 2002 154729 A1 (D1), which is considered to represent the closest prior art, describes a device for processing the signal emitted by a particle detector, said device comprising an integrator for measuring the total charge carried by a signal feeding said integrator for a predetermined period of time. The difference is that the device comprises a unit for reducing the fluctuating background noise component in the signal and for producing said signal. The present invention can therefore be considered to address the problem of providing a compact signal processing device with improved measurement quality. Since none of the citations suggests reducing the fluctuating component, or the resultant advantage of an improvement in the quality of measurement, claim 1 meets

#### INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/FR 03/03488

the PCT inventive step requirements.

### 4. Dependent claims

Claims 2-10 are dependent on claim 1 and thus also meet the PCT novelty and inventive step requirements.

# 5. Industrial applicability

The application as defined in claims 1-10 is obviously industrially applicable.
